Celery技术报告

资料核查

经严格核查参考资料[1][2][3]，现有内容完全聚焦于Python Web框架（Flask、Django、Quart与FastAPI）的性能对比、异步处理机制及Django的“开箱即用”特性[2]。所有项目结构、部署配置与压测数据均围绕Uvicorn与Gunicorn等ASGI/WSGI服务器展开[1]。

结论

给定上下文中未包含任何关于Celery分布式任务队列的技术说明、架构设计或性能基准。遵循“仅依据提供上下文事实”的原则，无法基于现有资料撰写Celery介绍报告。如需获取Celery的准确技术细节，建议补充专项文献。
